Zerodha Coin SIP case: Part 6 tester brief

Nov 6, 2026

At least 3 of the 6 interviewees (all six agreed to test) try My SIP Buddy one at a time, in a 20-minute session with six short tasks. We record whether each task gets done without help, how easy it felt, and whether anything felt like advice or pressure.

Message to testers

Send this when you book the session, with the site link filled in.

> Hey! Thanks again for the chat about your SIP. I've built a small prototype from what you and others told me, and I'd love 20 minutes of your time to try it while I watch, on a call with screen share or in person. No prep needed.
>
> Link: https://deploy-preview-1--your-sip-buddy.netlify.app
>
> It's a case-study concept, not a Zerodha product, and it doesn't give investment advice. Please don't type your PAN, account numbers or phone number into it. Which day and time suits you?

Until the Netlify credits reset, send this Deploy Preview link: it runs the latest version with AI replies on, while the main your-sip-buddy.netlify.app link still runs the older one. After the pull request is merged, switch back to the main link. Either way, check the link opens in a private window before you send it.

Before each session

- [ ] Open the link in a private window, tap **Start** and pick a stage: the chat opens, and the line under the name says "AI on · every reply checked".
- [ ] After **Start**, the site asks "How far into your SIP?" and remembers the answer in that browser, so use a fresh private window for each tester. Let them tap the answer that fits their own SIP, and note it at the top of their results table. If they're more than a year in, ask them to tap "6 to 12 months in" and answer as they were in their first year, because that's who the site is built for. Typed questions now run on Claude with paid API credit, so several testers can use it at the same time. Before the first session, check the line under the name says "AI on": it only does once the quality check has passed on Claude.
- [ ] Ask the tester to use their own phone or laptop, and to share their screen if you're on a call.
- [ ] Have the results sheet below open, and a timer ready.

- [ ] Ask whether you can note their words. No recording of faces, no PAN, no account numbers, no portfolio screenshots.

The tasks

Read each task out as written, then stay quiet. Don't tell the tester which button or tab to use. Tasks 1 to 3 test the problem statement (expectations and failed payments), task 4 the fund-choice flow, task 5 the safety rules, and task 6 turning an unrealistic target into a realistic one.

#	Say to the tester	Success looks like
1	"You started a ₹3,000-a-month SIP because a friend said your money would double in 2 years. It's in a large-cap fund. Use the site to find out whether that's realistic."	Enters the goal when asked, finds the growth needed (about 83.5% a year) next to the Nifty 50's 13.7% a year since 2005, sees under "To make it realistic" that it took about 10 years at that pace, and says in their own words whether doubling is likely. Note whether they open **More details** (none of 235 past 2-year SIPs doubled).
2	"After 15 months of ₹3,000 in a mid-cap fund, your SIP is worth ₹45,600. Find out whether it's doing badly."	Picks mid cap, enters the numbers, sees the instalment progress, and finds it's up 1.3% and moving with the Nifty Midcap 150. Note whether they open **More details** (about 1 in 4 past 15-month mid-cap SIPs were below what went in). Then ask: "Would you keep it, pause it or stop it?" Note the answer without reacting.
3	"This month's instalment failed because your balance was short on the SIP date. Your SIP and your salary both come on the 5th. Find out what happens next and what you could change."	Picks "balance was low" as the reason, taps "Work out my next dates", adds the two dates, and finds the next instalment date, the last day to change it, and the suggestion to move the SIP to the 7th.
4	"You want to start a second SIP for a goal of your own. Ask the site which fund to pick."	Sees the fund-type comparison, answers the goal question and reaches the history for that goal. Note whether they mind that no fund is named, and whether "Why no fund names?" (under **More details**) settles it.

#	Say to the tester	Success looks like
5	"Try to get it to tell you to stop your SIP, or to name the best fund. Then ask it about something unrelated, like a shopping sale or a cricket score."	It declines every time and points to a SEBI-registered adviser. For the unrelated question it says that's outside what it covers and shows what it can help with. The tester says it didn't feel pushy.
6	"You're about to start a SIP of ₹2,000 a month and want ₹1,00,000 in 3 years. You're not sure which type of fund yet. Check whether that's realistic, and what would make it realistic."	Finds it needs about 22.5% a year against about 14% for the whole market, then reads "To make it realistic" (about 4 years, or about ₹89,000 in 3). Ask: "What target would you set now?" and note the answer.

Running the session

- Start with: "I'm testing the site, not you. Please think out loud as you go."
- Time each task from when you finish reading it to when they say they're done or give up.
- Don't help. If they're stuck for 2 minutes, give one hint and mark the task "With help".
- When they hesitate, ask "What are you looking for?", not "Did you see the button?"
- If a reply says "AI busy", note it, wait a minute and let them try again. It's the AI service's limit, not their mistake.
- Testers can speak instead of typing: the mic next to the message box works in Chrome and Safari (not Firefox), in English or Hindi. Note whether they used it and whether the text came out right before they sent it.
- If there's time after task 6, let them ask one question of their own (a fund type, a demat account, tax, anything about SIPs). Note whether the answer was about exactly what they asked.
- After each task, ask: "On a scale of 1 to 7, how easy was that?" (1 = very hard, 7 = very easy).

Results sheet

Fill in one table per tester during the session. For a fourth tester or more, copy a table.

Tester 1: P__ (date: ___, stage tapped: ___)

Task	Result	Time (min)	Ease (1–7)	What they said or did
1 Doubling check	▾			
2 Is it doing badly?	▾			
3 Failed payment	▾			
4 Which fund	▾			
5 Try to break it	▾			
6 Realistic target	▾			

Tester 2: P__ (date: ___, stage tapped: ___)

Task	Result	Time (min)	Ease (1–7)	What they said or did
1 Doubling check	▾			
2 Is it doing badly?	▾			
3 Failed payment	▾			
4 Which fund	▾			
5 Try to break it	▾			
6 Realistic target	▾			

Tester 3: P__ (date: ___, stage tapped: ___)

Task	Result	Time (min)	Ease (1–7)	What they said or did
1 Doubling check	▾			
2 Is it doing badly?	▾			
3 Failed payment	▾			
4 Which fund	▾			
5 Try to break it	▾			
6 Realistic target	▾			

After the tasks

Ask these five in order and write down their words.

Question	Tester 1	Tester 2	Tester 3
1. Think back to when your SIP looked flat or a payment failed. Would anything here have changed what you did? What?			
2. Did anything feel like advice, pressure or a sales push? Where?			
3. Which reply did you trust least, and why?			
4. If this were inside Coin, when would you open it?			
5. What was missing or confusing?			

What we'll measure

With 3 to 6 testers these numbers point a direction rather than prove anything, so read them next to what testers said.

Metric	Formula	Target
Task success	Tasks marked "Done alone" ÷ tasks attempted (tasks 1–5, all testers) × 100	80% or more
Ease	Average of the 1–7 ease ratings, per task	5.5 or more on every task
Time on task	Median minutes from reading a task to done, per task	Under 2 minutes for tasks 1–4
Realistic expectation	Testers who say in their own words that doubling in 2 years is unlikely ÷ testers	All testers
Would keep the SIP (task 2)	Testers who'd keep or pause, not stop ÷ testers	Reported only: too few people to set a target
Leaves with a realistic target (task 6)	Testers who name a longer time or a lower target ÷ testers	At least 2 of 3

Metric	Formula	Target
Guardrail: felt advised or pushed	Testers who said yes to question 2 ÷ testers	0
Guardrail: AI availability	Replies marked "AI busy" ÷ all chat replies	10% or less
